DETAILED ACTION

Claim 1,7 are rejected under 35 U.S.C. 102(b) as being anticipated by Cushman et al .

As to claims 1,7, Cushman et al teach use of a transmit/receive transducer 114 (col. 31, lines 27-35) to measure parameters to derive a “particle size distribution” (col. 12, line 65). The “distribution” is “derived” (col. 12, line 67) from “Equation 18” (col. 12, line 62), which relation relates back to Equations 4-10. The measurements taken the by transducer, and used in the Equations, take into account the existence of particles that are being shadowed (“shadow”, col. 8, line 10) by other particles, as the shadowed particles “will subtract from the total number of particles per unit volume” (col. 8, lines 56-57). As the equations take shadowing into account, it employs a correction as claimed.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cushman et al.

As to claim 8, it would have been obvious to operate Cushman’s method via a computer program as microprocessors permit for efficiently carrying out steps in measurements of liquids that requiring processing of data.

Claims 2-6,9,10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
